WORK EXPERIENCE

R7321 Game Studio - *Independent Game Developer*
OCT 2018 - PRESENT

- Built and released multiple PC games and technical prototypes as a solo developer, owning design, programming, content production, QA, documentation, build/release workflows, store setup, updates, and player feedback.

- Developed Unity/C# gameplay systems, UI, save/configuration, audio, localization for several languages, debugging, and asset-pipeline systems across 2D and 3D projects.

- Created supporting tools and workflows for project planning, 3D asset inspection, reusable Unity systems, rapid prototyping, generated-media pipelines, and production organization.

DataAnnotation - *AI Data Training Contractor - Computer Science and Programming*
OCT 2025 - JAN 2026

- Evaluated AI-generated responses for programming, computer science, and game-development-related tasks, reviewing code correctness, debugging logic, clarity, maintainability, and technical explanation quality.

- Provided structured technical feedback on model behavior, programming solutions, and code explanations in a paid task-based contract environment.

PROJECTS

Sidereal - *December 2024* | Steam
3D environment exploration game released on Steam with Positive reviews, 100+ explorable worlds and a highly customized production pipeline using emerging generative tools for distinctive visual content.

Tears Fall Low - *June 2023* | Steam
2D platformer released on Steam with Very Positive reviews, narrative progression, platforming/combat mechanics, Windows/macOS/Linux builds, and support for 12 languages.

Sunrise 7 - *March 2020* | Steam
2D adventure/action game released on Itch.io, Game Jolt, and Steam. Demo reached 21,000+ downloads, with procedural worlds, fast mechanics, and a custom soundtrack.

Technical Tools - *Ongoing* | Tools Page
Open source tools for game development and production workflows. Includes apps for project planning, reusable Unity systems and tooling, creative planning, fast 3D asset inspection, and rapid gameplay/rendering prototypes.

EDUCATION

Rochester Institute of Technology, Rochester, NY - Coursework toward B.S. in Game Design and Development
AUG 2017 - OCT 2019

Coursework included game development, algorithmic problem solving, graphical simulation, data structures and algorithms for games/simulations, 2D/3D asset production, website design, interactive media, physics, writing, and psychology.

SKILLS

Interactive development: Unity, C#, 2D/3D gameplay systems, UI/UX, technical prototypes, QA, debugging, documentation
Programming: C#, C++, Java, Python, JavaScript, HTML, CSS
3D / art pipelines: Blender, Maya, ZBrush, Substance Suite, Adobe Suite, Krita, asset optimization
Audio / production: Ableton Live 12, Wwise, FMOD, music and sound design
Workflow / tools: GitHub, version control, Microsoft Office, Zoom, Slack, Discord, Obsidian, Canva, Figma
AI-assisted workflows: Codex, Claude, ChatGPT, asset production and refinement, code review, generated-media pipelines
Computer hardware: Custom PC building, component selection, troubleshooting, optimization, and hardware/software setup
